

Activity: Matching Drug Classification to Medication Name

Instructions: Match the drug classification to the example drug name. Instructors may randomize the answers and adjust the corresponding answer key.

	Drug Classification		Medication Name
1	Antidepressant (SSRI)	A	Sertraline
2	Antidepressant (SNRI)	B	Venlafaxine
3	Atypical Antidepressant	C	Bupropion
4	Typical Antipsychotic	D	Haloperidol
5	Atypical Antipsychotic	E	Quetiapine
6	Mood Stabilizer	F	Lithium
7	Mood Stabilizer (anticonvulsant)	G	Lamotrigine
8	Benzodiazepine (Anxiolytic)	H	Lorazepam
9	Non benzodiazepine (Anxiolytic)	I	Buspirone
10	Stimulant	J	Methylphenidate

Answer Key

1. Antidepressant (SSRI) → A. Sertraline
2. Antidepressant (SNRI) → B. Venlafaxine
3. Atypical Antidepressant → C. Bupropion
4. Typical Antipsychotic → D. Haloperidol
5. Atypical Antipsychotic → E. Quetiapine
6. Mood Stabilizer (Lithium) → F. Lithium
7. Mood Stabilizer (Anticonvulsant) → G. Lamotrigine
8. Benzodiazepine (Anxiolytic) → H. Lorazepam
9. Non-benzodiazepine Anxiolytic → I. Buspirone
10. Stimulant → J. Methylphenidate
